

OREGO-STIM®

A Meriden Animal Health Product

100% NATURAL FEED FLAVOUR

Orego-Stim® is the 100% natural feed additive/flavour that is being used globally not only for its appetising effects but also to enhance Poultry production.

The appetising effects of *Orego-Stim*®

The phenolic compounds within *Orego-Stim*® give it a unique and aromatic flavour.

Phenols are aromatic substances that are commonly used for food flavouring. *Orego-Stim*® contains a natural mixture of different phenols and is used as an appetiser in livestock feeds to enhance its palatability. The phenols within *Orego-Stim*® stimulate the olfactory cells in the nasal cavity and the taste buds, which then trigger the olfactory and glossopharyngeal pathways of the cranial nerves, provoking a feeling of hunger and an increase in salivation and an improvement in appetite. This encourages the secretion of digestive enzymes in the gastrointestinal tract and the process of digestion. As a result, there is an increase in feed intake, as the animal starts to consume more food.

The production enhancing effects of *Orego-Stim*® in Poultry

- Improving palatability and feed intake
- Improving growth and feed conversion ratio
- Maximising intestinal health
- Decreasing incidences of diarrhoea caused by common intestinal diseases
- Optimising growth of the intestinal villi for better absorption of nutrients
- Helping to maintain a healthy immune system
- Reducing mortality
- Providing extra protection during stressful periods
- Producing drier faeces + drier litter = less ammonia
- Improving efficiency of growers
- Improving the efficiency of layers and uniformity of the eggs
- Increasing egg production
- Reducing the number of cracked, inferior and dirty eggs

Tried and tested - *Orego-Stim*® has been continuously researched over many years. Full commercial, clinical and university trials are available on request.
